 \*\*\* INCLUDES MAX. 5% UNDER 20/64 INCH. % ALSO INCLUDED IN CHIP & SCRATCH

### Nonpareil

Considered the "King" of snacking almonds, this variety also has the widest range of uses. Because of its thin outer shell, uniform shape, and smooth kernel, it is less likely to chip and scratch during processing - making the Nonpareil the best choice when an attractive appearance is needed.

### California Group

This group includes a number of varieties, including Monterey and Sonora. These varieties are primarily used in processing and blanching. Shape and color may vary, however, the kernels are more round and the skins darker than the Nonpareil.

### Carmel

This popular nut is a soft-shell variety and is most often used for blanching and roasting. The Carmel has a large elongated kernel, a uniform shape, and even light caramel color. Because of this it is often used a substitute for Nonpareil.

### Mission Group

This group includes several varieties, including Padre, Butte and Fritz. The kernels are small, wide and plump with a dark skin. The Mission varieties are used in processing and blanching, however, because of their full-bodied flavor, they are the perfect choice for roasting and flavoring.
